

Kidzsafe™ Earbuds

Item #: KS-2010 (indicate color; blue, pink, or green)

Description: Kidzsafe Earbuds

WHAT IS IT?

Earbuds that control output level of audio devices no matter how high volume turned up on audio device. It has been specifically designed for children.

HOW DOES IT WORK?

Kidzsafe™ Earbuds are compatible with any audio device. The technology equipped in each ear bud enables the user to listen to music and to experience an increase in volume but only to a certain point, after which additional increases in the volume control will not correspond to increases in audio device output. The product automatically limits the output to just below 85 dB SPL. The product features a rubberized earbud casing and premium gauge cord which prevents tangling while offering increased durability. Product comes with storage pouch.

HOW IS THE PRODUCT SET UP?

- Plug the earbuds into any audio device via 3.5 mm jack
- Insert earbuds in each ear
- Use the audio device per usual knowing that the volume at the level of the earbuds will remain below 85 dB SPL.
