

KidzSafe Earbuds & Headphones

ITEM #: KS-2010 (indicate color; blue, pink, or green)
DESCRIPTION: KidzSafe Earbuds

WHAT IS IT?

Earbuds and headphones that control the output level of audio devices no matter how high the volume is turned up on the audio device. It has been specifically designed for children.

HOW IS THE PRODUCT SET UP?

- Plug the earbuds into any audio device via 3.5 mm jack
- Insert earbuds in each ear
- Use the audio device per usual knowing that the volume at the level of the earbuds will remain below 85 dB SPL.

HOW DOES IT WORK?

- The technology equipped in each earbud enables the user to listen to music and to experience an increase in volume but only to a certain point, after which additional increases in the volume control will not correspond to increases in audio device output.

IMPORTANT TALKING POINTS:

- Automatically limits the output to just below 85 dB SPL, the level doctors agree if exceeded can cause permanent hearing loss
- Comes with storage pouch
- Compatible with any audio device
- Features a rubberized earbud casing and premium gauge cord which prevents tangling while offering increased durability.
- Comes with three Earplug sizes to fit any ear
- Prevents Children from Noise Induced Hearing Loss, which can occur at 85dB (some MP3 players can exceed 120dB!)
