

Figures 1a-b. Output envelope of a simulated 1000 Hz auditory filter generated from the Danish sentence “Nu kan en ny jagt begynde” (translation: “Now a new hunt can begin”) using slow-acting compression with wide (3-channel) and narrow (15-channel) frequency bandwidths (Figure 1a), and fast-acting compression with wide and narrow frequency bandwidths (Figure 1b). Linear processing is shown in black.
