

I'm Listening

I'm all about ear candy.
Groove-shakin'. Hangin'
loose. Livin' the music.
I create it. Express it.
Get off on performin' it.
But before the session
or concert starts,
I protect myself from the
hearing damage high
levels of sound can cause.
I am listening —
with high fidelity
Musicians Earplugs™
from Westone.®

Westone

Are You Listening?

The volume of a typical rock concert measures 115 decibels — more than a chain saw and just a little less than a jet engine! Fifteen minutes of that kind of pounding and some serious damage is done. Yet musicians and concert fans alike avoid conventional earplugs which muffle and distort the sound. The solution? Musicians Earplugs.™ These high-tech, filtered earplugs replicate the natural response of the ear canal so you hear high quality sound. It's just quieter. The sound is simply turned down without changing it. Very cool! See your hearing healthcare professional and ask about Westone® Musicians Earplugs.™

You'll want to listen.

Musicians, concert fans and other working professionals are exposed to damaging levels of sound

Musicians aren't the only people exposed to elevated levels of sound. If you work in the following professions or enjoy concerts or nightclubs, consider Musicians Earplugs.™

Aircraft: Pilots, flight instructors and crew.

Motorsports: Motorcyclists, race car drivers and pit crews.

Emergency Vehicles: EMTs, highway patrol and firefighters.

Construction: Carpenters, equipment operators, steelworkers, road builders.

Industrial: Factory workers, shop teachers, supervisors, printshops

Medical and Dental: Dentists, dental hygienists, dental technicians, surgeons.

Athletics: Athletes and coaches.

Music Education: Instructors and students of school bands.

The Solution: Westone® Musicians Earplugs™ and Monitors
