Tinnitus Care: What Should I Know When Starting to Provide Tinnitus Care?

Presenter: William H. Martin, PhD
Professor of Otolaryngology at the National University of Singapore

Moderator: Carolyn Smaka, AuD, Editor in Chief, AudiologyOnline

- Technical Assistance: 800-753-2160
- CEU Total Access members can earn credit for this course
  - Must complete outcome measure with passing score (within 7 days for live webinar; within 30 days of registration for recorded/text/podcast formats)
- Questions? Call 800-753-2160 or use Contact link on AudiologyOnline.com
Tinnitus Care: What Should I Know When Starting to Provide Tinnitus Care?

William Hal Martin, PhD
National University of Singapore
Center for Hearing, Speech & Balance

Tinnitus

• What is it?
• What causes it?
• How does it impact patients?
• Tinnitus treatment vs. management?
• Where do I start?
Tinnitus
from the Latin *tinnire*, meaning to ring

Ringing, hissing, humming, buzzing, roaring, crackling, sizzling, wooshing, howling, grinding …

No one else hears it but you.

What is tinnitus?

• The perception of sound, typically in the absence of an external acoustic signal.
• Objective - mechanical source
• Subjective - physiological but non-mechanical source
• Neural signals interpreted by the brain as sound
### Epidemiology

- **1999-2004 National Health and Nutrition Examination Surveys (NHANES)**
  - Any tinnitus: 25.3% >80 million
    - 26.1% of men
    - 24.9% of women
  - Frequent tinnitus: 7.9% >25 million
    - 9.4% of men
    - 6.5% of women

  Shargorodsky 2010

### Increased odds of frequent tinnitus:

- White, non-Hispanic
- > 40 years old
- Smoker
- Hypertensive
- Diabetic
- Overweight
- High cholesterol
- Noise exposure
- Major depressive disorder
- Generalized anxiety disorder
- Have hearing loss

Shargorodsky 2010
Tinnitus

- In adults, exposure to sudden or prolonged sounds is the most commonly reported factor related to the onset of tinnitus. Meikle, Creedon, Griest 2007
- Present after 90% of acoustic trauma events. Mrena et al 2004
- Tinnitus may be an early indicator of impending NIHL. Griest & Bishop 1998

One way to prevent tinnitus is to reduce lifetime sound exposure.

Tinnitus in kids

- Tinnitus in 7 year olds
  12% experience tinnitus
  2.5% say onset after loud sound
  Holgers, K-M, 2003

- Tinnitus in 5-12 year olds
  37.5% experience tinnitus “sensation”
  19.6% experience tinnitus “suffering”
  Noise exposure significant risk factor
  Coelho et al, 2007
Tinnitus in kids

9 - 11 year old students were asked:
“Do you ever experience ringing or other noises in your ear(s) or head?”

- never: 24%
- rarely: 28%
- sometimes: 30%
- often: 11%
- always: 6%

{n = 1949} Martin et al. 2011

47%
Mechanisms of Tinnitus

- INDUCTION of tinnitus usually involves peripheral pathologies that result in imbalances of activity in the CNS. Abnormal spontaneous neural activity produces tinnitus perception.

- MAINTENANCE of tinnitus involves central auditory structures that are not necessarily impaired.

Peripheral triggers

- Cochlear damage
- Head & neck injury
- TMJ
- Other?
Central triggers

- Metabolic
- Neurologic disease
- Stress
- Brain injury
- Other?

Long term effects

- Deafferentation
- Cytotoxicity
- Excitatory/inhibitor imbalance
- Cortical reorganization
- Thalamocortical disrhythmias
- Other?
In what ways does tinnitus impact a patient’s life?

Problematic Tinnitus

- Novelty
- Fear
- Selective attention
- Reinforcement
- Negative counseling
  “There’s nothing that can be done about it”
  “You may have a brain tumor”

Goal of Treatment Program

- To medically or surgically resolve active disease processes causing tinnitus
- To eliminate the presence of tinnitus

Whenever possible, active disease processes should be identified and treated prior to tinnitus management
Problematic Tinnitus

MD visit

Most begin their journey with a visit to the doctor’s office

Problematic Tinnitus

Active disease

No active disease
Problematic Tinnitus

MD visit

Active disease

No active disease

Objective tinnitus

Vascular abnormalities

- Congential arteriovenous fistula
- Acquired arteriovenous shunt
- Glomus juglare
- High-riding carotid artery
- Carotid stenosis
- Persistent stapedial artery
- Dehiscent juglar bulb
- Vascular loop (e.g. AICA or PICA)
Objective tinnitus

Mechanical disorders
- Patent Eustachian tube
- Palatal myoclonus
- Temporomandibular joint disorder
- Stapedial muscle spasticity

Problematic Tinnitus

MD visit

Active disease
No active disease

Subjective tinnitus
Subjective tinnitus
- Otosclerosis
- Infections – bacterial, viral, fungal
- Autoimmune hearing loss
- Endolympathic hydrops / Meniere’s
- Neoplasms
- Otitis media
- Benign intracranial hypertension

Subjective tinnitus
- Genetic predisposition
- Ototoxicity
- Vascular – hypertension, CVA, cerebral aneurysm, arteriosclerosis
- Metabolic – anemia, hypothyroidism, diabetes mellitus
- Head or neck injury
Problematic Tinnitus

Tinnitus Management
Tinnitus: Questions to reveal the cause, answers to provide relief
RL Folmer, WH Martin, YB Shi

*Journal of Family Practice* 53(7): 532-540, 2004

“As with chronic pain, the treatment of chronic tinnitus is more accurately described in terms of management rather than cure.”

Duckro et al. *Biofeedback and Self-Regulation*
1984;9(4):459-469
Goal of Management Program

• Reduce perception of and reaction to tinnitus until it is no longer a controlling factor in the person’s life

• Provide long-term relief and control

The Tinnitus Specialist
Tinnitus Specialist

The role of the tinnitus specialist often exceeds the realm of traditional audiology in order to produce effective tinnitus management.

- **Identify** - all factors that impact tinnitus severity
- **Educate** – the patient regarding the impact on tinnitus
- **Persuade** – the patient to pursue parallel interventions
- **Facilitate** – assist patient in identifying needed care
- **Coordinate** – serve as intermediary between clinicians
- **Follow** – monitor progress, assist with obstacles
- **Modify** – management plan as needed
