Comfort Features Voice Ranger

NEW!

- Scenario: distraction by competing conversations
- Solution: Voice Ranger
- Benefit: Reduces distractions and maintains the natural balance between the target speaker and competing speakers providing a more relaxed and enjoyable listening experience.
- Ideal for noisy environments where there are other voices behind the target speaker.
- Separates target speech from speech noise

Comfort Features Reverb Reducer

- **Scenario:** bothersome sound quality in environments with hard surfaces
- Solution: Reverb Reducer
- Benefit: Improves the wearer's listening comfort in reverberant environments
- Recommended use:
 - o Places of worship
 - o Museums
 - o Airports
- A unique program option
- Minimizes distraction from reverberation
- Reverb Reducer cuts down echo effect
- Easily added to hearing instrument programming in Program Handling

Comfort Features Music Enhancer

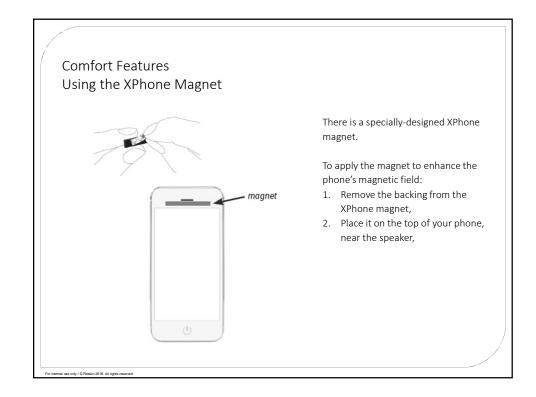

- Scenario: music lacks natural quality
- Solution: Music Enhancer
- Benefit: Preserves the emotion and richness of music for greater listening enjoyment
- Recommended use: patients with more discriminating music needs
 - Musicians
 - Music lovers
- 3 unique program options easily added in Program Handling
 - o Live music performances
 - o Performing music
 - o Recorded music

NEW!

- Scenario: trouble hearing the phone clearly
- Solution: XPhone
- Benefit: Binaural amplification of the phone for a louder, clearer signal.
- Recommended use: patients that use a hand-held phone.
- Unique phone program easily added in Program Handling
- Activates and de-activates automatically
- Simultaneously sends the phone signal to both ears

Comfort Features T-Coil Connectivity

Hearing Aid Compatible

- A built in Telecoil provides connectivity to:
 - Telephones
 - Landlines
 - Telecoil compatible cell phones
 - Hearing loops (Induction systems)
- The Autophone feature makes this function automatic when used with telephones.
 - Telecoil is not automatically activated in memory 1. It requires a dedicated memory.

Speech Centered Fratures Auto Directional iLock

PROVEN!

- Scenario: trouble hearing in restaurant, family gatherings, social events
- Solution: Auto Directional iLock
- Benefit:
 - Better speech understanding in extremely challenging and noisy environments
- Advanced adaptive directional system capable of creating directional beams as narrow as 10 degrees
- Default microphone in the first program
- Narrow directionality is activated automatically based on acoustic environment. App or remote are not required.

Speech Centered Features Auto iFocus 360 & iFocus 360

- **Scenario:** trouble hearing speech behind you
- Solution: Auto/iFocus 360
- Benefit:
 - Enhances speech understanding in environments where turning to see the speaker is difficult.
- Recommended use: to hear speech from front, back, left or right.
- Automatic in a car in the first program
- May also be added as a unique program for:
 - Lawyers Medical
- People in
- Medical professionals
- wheelchairs Teachers
- True directionality from any direction
 - Directionality is engaged automatically or with the use of apps

Speech Centered Features Automatic Noise Reduction

PROVEN!

- Scenario: speech drowned out by background noise
- Solution: Automatic Noise Reduction
- Benefit:
 - Provides improved comfort and reduces listening fatigue
- Ideal for anyone bothered by background noise.
- Automatically provides the appropriate amount of noise reduction
- Automatically reduces 3 types of noise:
 - $_{\circ}$ $\,$ Steady state noise (motors, fans, etc.)
 - o Impact noise (dishes, papers, keys)
 - 。 Speech noise (group noise, restaurants)

Speech Centered Features Wind Noise Cancellation

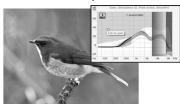

- Scenario: annoying wind noise
- **Solution:** Wind Noise Cancellation
- Renefit:
 - Increased user comfort and speech understanding in wind noise
- Ideal for active patients that need to be able to listen to conversations when outside.
- Automatic in the first program
- Effectively cancels wind noise without affecting speech signal
- Engages in less than 1 second of onset of wind noise

Widest Fitting Range S-receiver 45 dB W-receiver 70 dB General guidelines: Use open dome is low frequencies are 20 dB or better Use semiopen dome if low frequencies are 25-40 dB Use closed dome if low frequencies are 45-65 dB Use double dome if low frequencies are 65 dB or worse

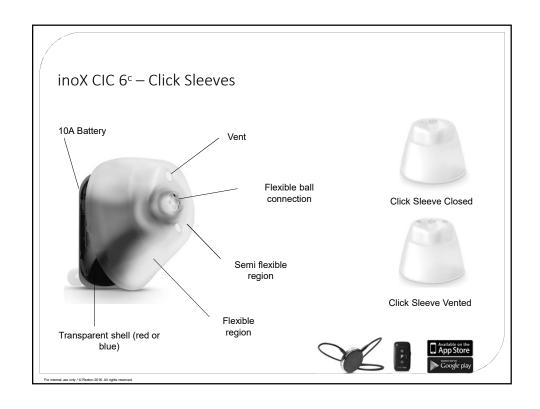

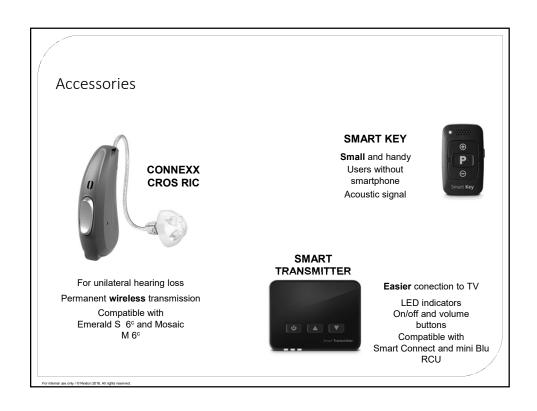

Connexx 8 What's New

• Mimic Fit

Easily transfer demo settings into TruCore hearing aids

· Program Link

Link programs together for efficient programming

• Decouple Volume Control

o Personalize volume control settings

· Copy to Program 1

Flexible programming

· Interactive Curve Display

。 Quick adjustments

· QR Code for Smart Remote app

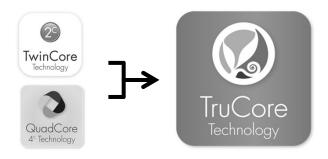

。 Simplifies setup of Smart Remote app

Connexx 8 Mimic Fit

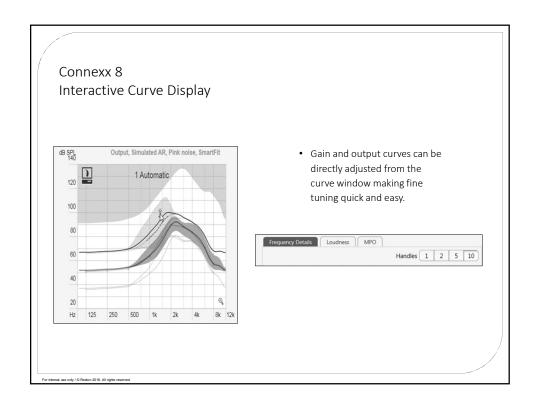

- Mimic Fit: transfer fitting session from any TwinCore and QuadCore device into the TruCore hearing aids.
 - Transfers gain settings of memory 1, program labels, and configuration settings. Other fine tuning changes are not transferred. Programs 2-6 are realigned with memory 1.
- Mimic Fit also allows receivers to be changed without requiring a new First Fit.

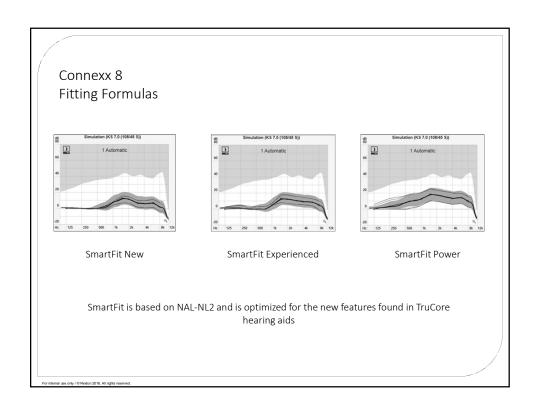

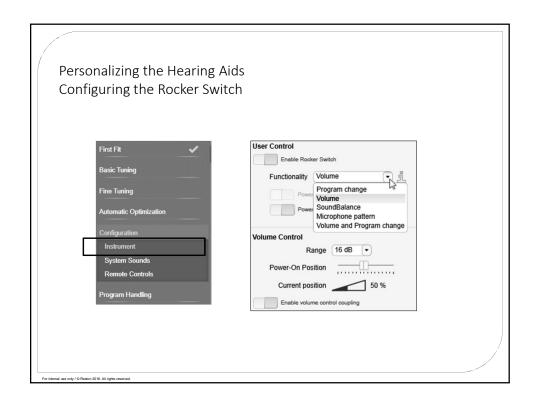

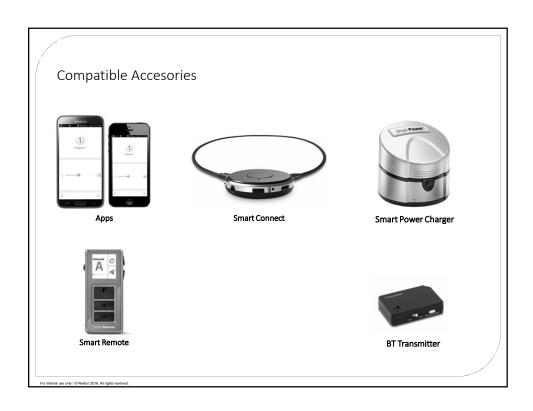

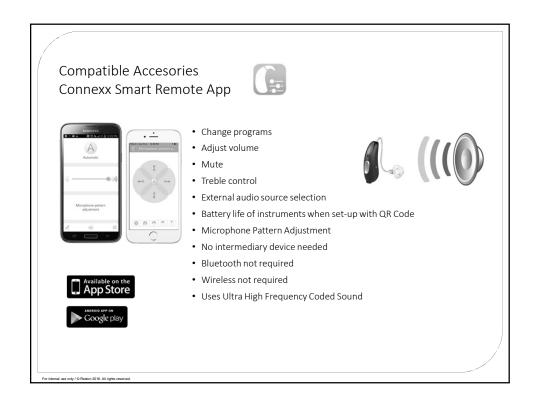

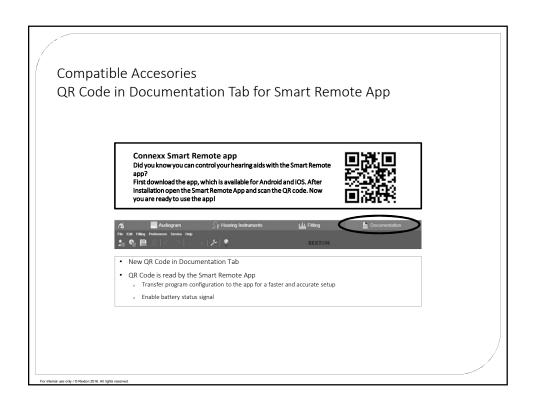

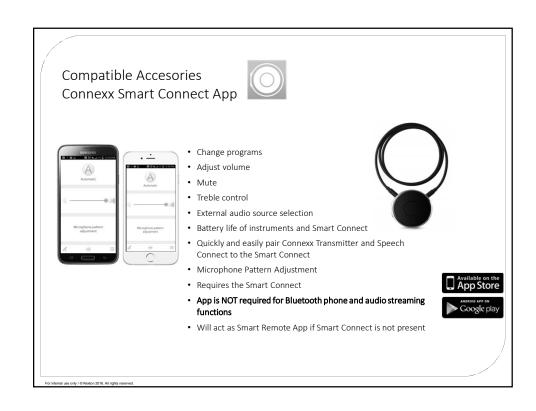

Thank you!
