Helping Them Soar.
Putting Your Child’s Hearing First

Your child’s hearing comes first. To ensure this, we focus on what we do best: designing incredibly durable, consistently reliable hearing technology for active young bodies.

Children learn to communicate by imitating the sounds they hear, and for children with a hearing loss, it is vital that they are given access to as many sounds as possible so they don’t miss out on the speech and language around them.

That’s where Widex hearing aids for children come in. We push past traditional hearing aid boundaries. Just like kids do. Our hearing aids are designed to not just sound great — but to adjust to the different listening environments children are exposed to every day.

You can rest assured that Widex hearing aids for children are comfortable to wear the whole day so that your child can enjoy the superior sound quality.

All so that your child can soar.
Why Widex for Your Child?

**Superior Sound Quality**
The innovative chip technology in Widex hearing aids for children provides the cleanest, purest sound of any hearing instrument in the industry. With it, your child can enjoy the most accurate listening experience, even in difficult situations.

**Hear Better in Noise**
Children are often in noisy situations — from socializing with family, to playing with friends and at school. This makes it a challenge to hear speech. Widex hearing aids reduce background noise to give your child better understanding of speech. The hearing aids also take into account your child’s individual hearing loss, constantly analyzing the sound situation and then adjusting themselves. Your child can concentrate on sounds to the left, right, front and behind, staying safer and better connected to his/her surroundings.

**Hear Every Word — Including Soft Sounds**
It can be hard to hear high pitched sounds — like children’s voices, birds singing and music. Our hearing aids provide better access to soft sounds, and can even shift these sounds to an area of better hearing if needed.

Widex technology also enables your child to pick up important speech cues — such as soft sounds — without adjusting the volume. Missing these cues can lead to frustration, difficulty in school, and speech delays. Widex hearing aids automatically make the necessary adjustments so that your child has consistent access to soft speech sounds and won’t miss a thing.

**Better Concentration**
In the classroom, it can be hard to hear teachers when there is a lot of background noise, even with hearing aids. An FM wireless system can help.

Here’s how it works: your child’s teacher wears an FM transmitter which wirelessly connects to the Widex FM+DEX. The FM+DEX sends a wireless signal to your child’s hearing aids so he/she can hear the teacher’s words directly in his/her ears. FM systems can also be used at home in place of headphones. FM systems are perfectly safe and very easy to use.
More Connected than Any Other Hearing Aid

We know your child is on the move, so we’ve developed unique technology that keeps our hearing aids — and your child — connected to his/her world.

First, if your child wears two hearing aids, WidexLink™ allows the left and right aids to communicate with each other constantly, analyzing listening situations, applying settings appropriate to your child’s needs, and responding to changes in the environment based on his/her habits.

Next, our TRI-LINK™ technology instantly connects your child’s hearing aids to T-coils, Bluetooth devices, and the complete collection of Widex DEX™ listening accessories. DEX devices enable our superior sound quality to stream directly to your child’s hearing aids, making it easier for him/her to connect to audio equipment, remote controls, TVs, gaming systems and mobile or landline phones.

Lastly, using our BEYOND™ app, you and your child can adjust and personalize BEYOND hearing aid settings right from your iPhone® or Android™. Plus, iPhone audio streams directly into the BEYOND hearing aids for effortless listening to audio, music, and phone calls.

Apple, the Apple logo and iPhone are trademarks of Apple Inc., registered in the U.S. and other countries. App Store is a service mark of Apple Inc. Android, Google Play and the Google Play logo are trademarks of Google Inc.
More Sounds, More Power
Widex hearing aids have the lowest power consumption of any hearing aids in the world — even when streaming sound from an iPhone®! That means far fewer battery changes. Plus, our BEYOND hearing aids are now available with optional rechargeable batteries which boast the same low battery drain.

Other Ways Widex Hearing Aids Work to Help
- Reduce whistling or feedback so that it is always pleasant to wear the hearing aid
- Reduce wind noise better than any other hearing aid, providing 30% better speech understanding in wind*
- Help with children’s language and speech development — in fact, studies conducted with school-age children have shown that the perception and production of speech sounds can improve significantly with Widex hearing aids

Accessories
Using a hearing aid should be as easy as possible. Widex offers accessories to help your child concentrate on being a kid, rather than focusing on his/her hearing aids.
- Age-appropriate kit with everything needed to maintain their hearing aids
- Specially designed tape can help keep the hearing aid in place — this is particularly useful for smaller children
- Remote controls are available

Widex Hearing Aids for Children

Widex hearing aids for children are behind-the-ear (BTE) or receiver-in-canal (RIC) models. These types of hearing aids are perfect for children because they suit a wide range of hearing losses and are easily adaptable to your child’s ears as they grow. Plus, your Hearing Healthcare Professional can quickly fine-tune settings and programs to make sure the hearing aid works best for your child’s particular needs.

The Widex family of hearing aids for children includes BEYOND, UNIQUE and BABY. All feature state-of-the-art Widex technology and suit all types of hearing loss.

Talk to your Hearing Healthcare Professional to decide which option is best to help your child soar.

All our BTE/RIC models come in a range of kid-friendly colors, from Shocking Pink to Pearl Blue.

Color availability varies based on model.
Widex is a family owned company founded in Denmark in 1956. Today, it is one of the world’s largest manufacturers of hearing aids. We develop digital technology at a level of quality that few can match, and this has forged our reputation as one of the most innovative manufacturers in the industry. Our uncompromising approach to innovation has led to such advances as the world’s first digital in-the-ear hearing aid, as well as our own revolutionary wireless technology.
