Why do patients come to see you?

#1

Complaint of the majority of people with hearing loss is speech-in-noise

Conversations in noise and crowds are the listening situation they struggle with the most.

MarkeTrak 9

48% of people with hearing loss have trouble distinguishing speech from noise.

Harris Poll survey of 2,018 adults

Even perfectly loud speech can be hard to understand in a noisy room. This is because background noise doesn't just cover up conversation — it may scramble brain activity.

Research at University of Florida College of Medicine

Listening in noise is arguably the major complaint of most people with hearing loss.

Andrea Pittman, PhD, audiologist, author, associate professor

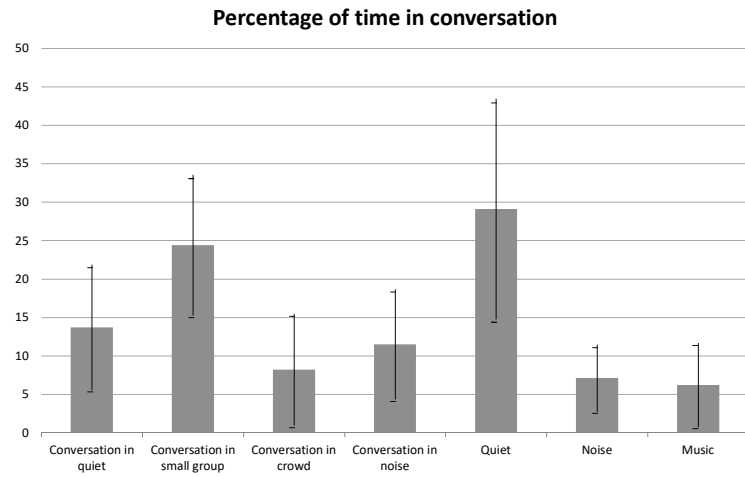

People who wear hearing instruments
spend almost two thirds of each day
connecting through conversations.

Hayes, D. (2017) "How much do you really know about your patient?"
Hearing Review, 24(4):22-23.

Conversations dominate

Across the globe, age, gender, and population density

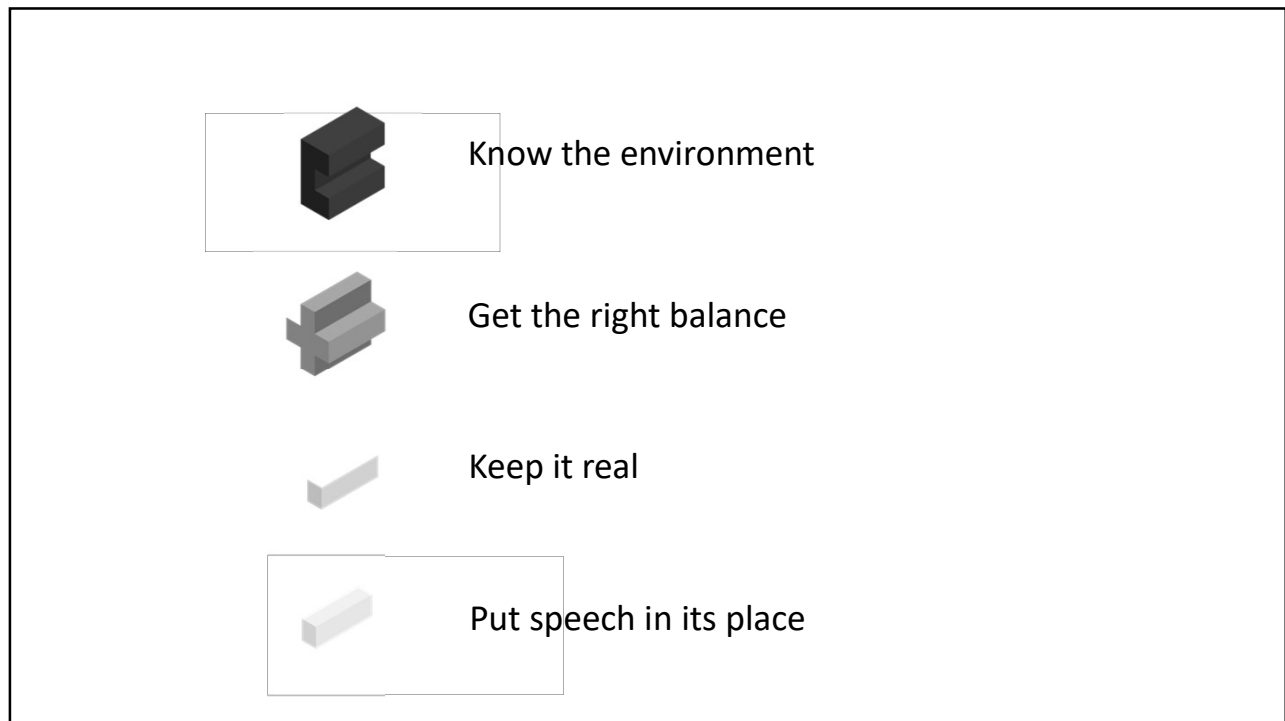

Hayes, D. (2017)

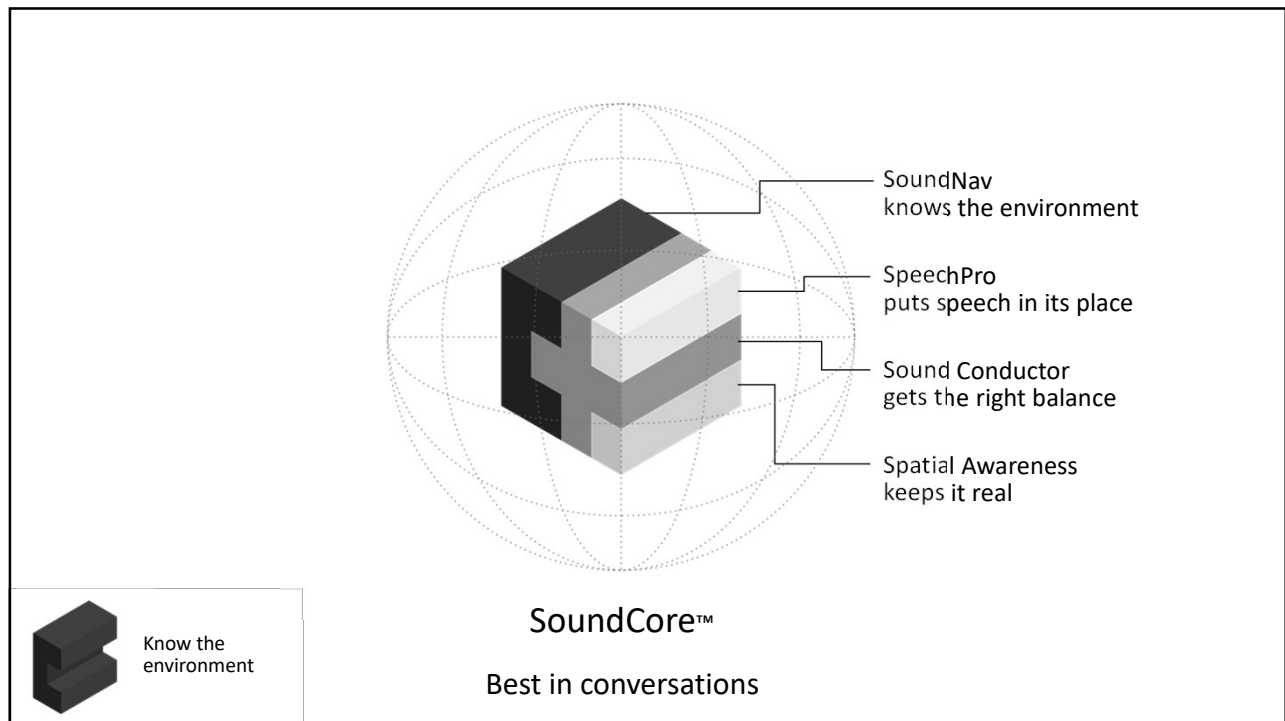

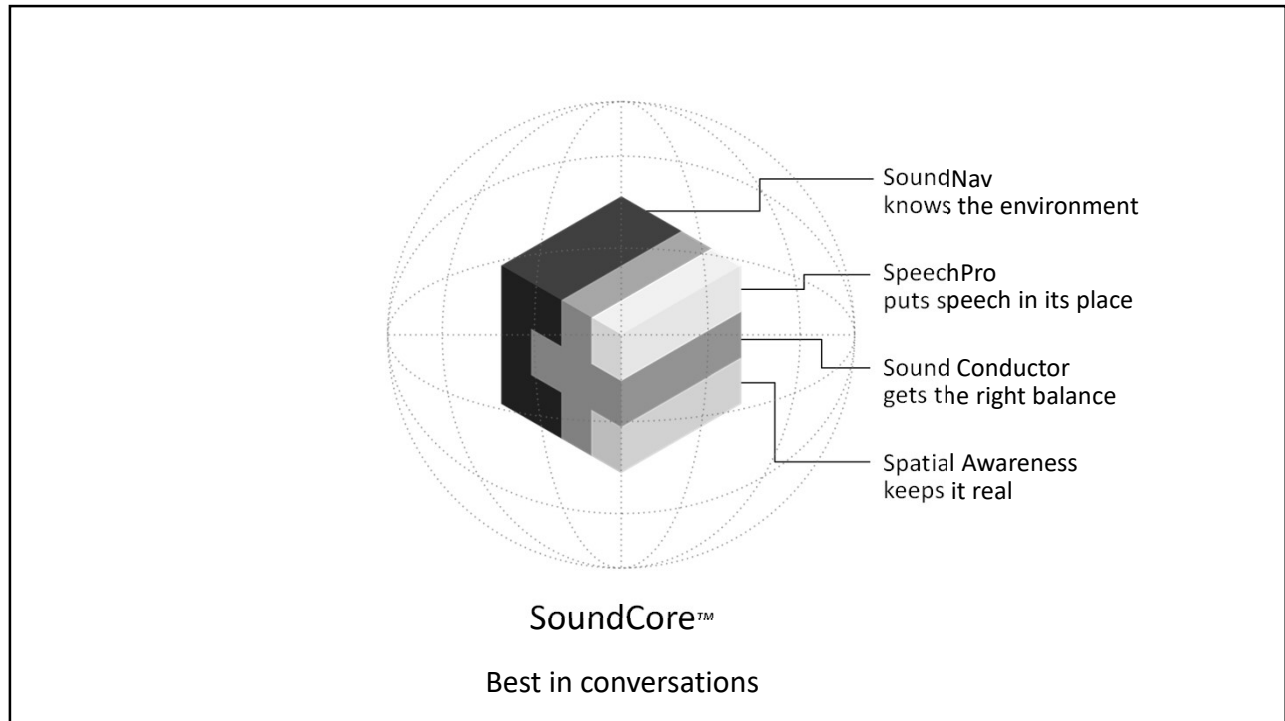

Sonova

band resolution

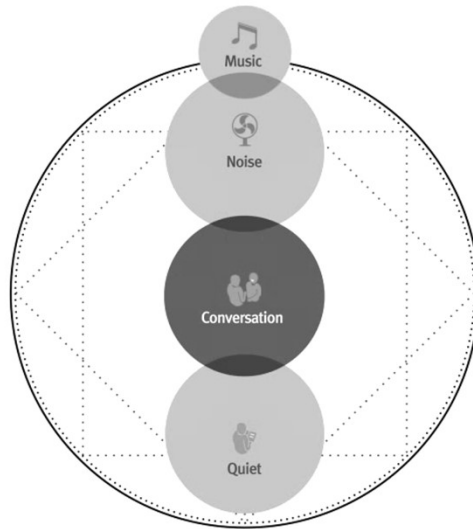

65 nm technology

SoundNav analyzes the environment 689 times per second

Know the environment

Scenario:
Listening to live jazz.
Acoustic environment:
Jazz vocalist with background instruments.

Tempus hearing aids are great in music

No input distortion

- 24 bit ADC = high resolution providing faithful reproduction without distortion

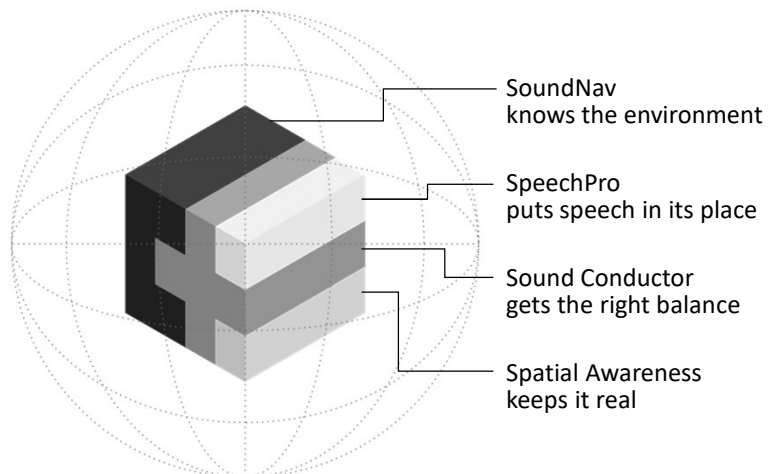

Full range of sound from quiet to loud

- 119dB SPL max input dynamic range

MyMusic

- Frequency shaping to enhance preferred music genre

Binaural synchronization

Get the
right balance

SoundCore™

Best in conversations

Getting the combination right

Sound Conductor controls the balance of:

- Speech enhancement
- Noise reduction
- Directionality

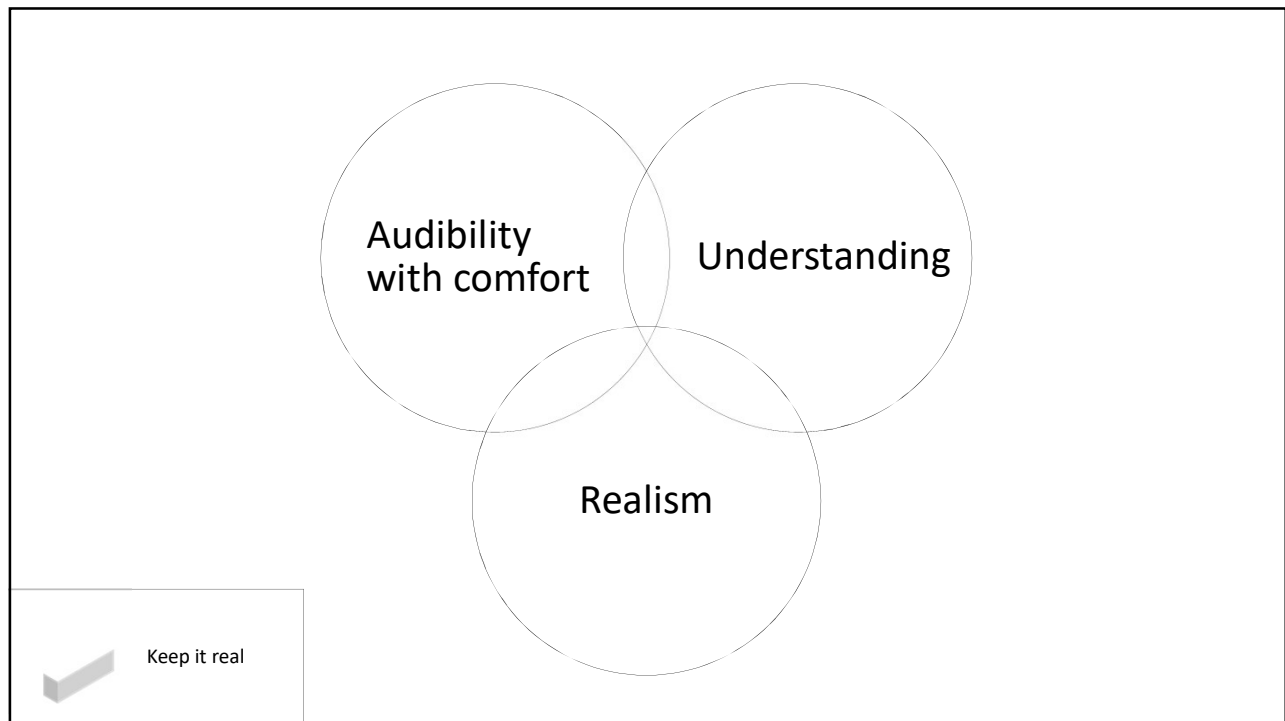

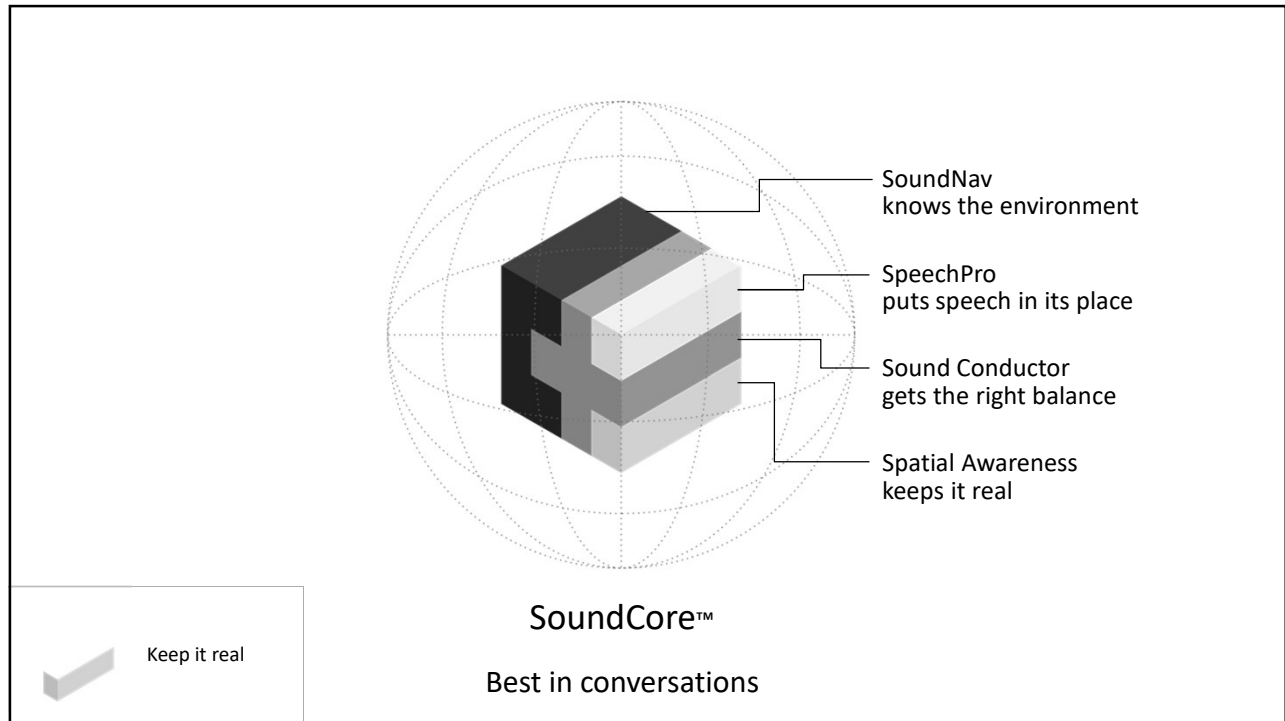

Get the
right balance

SJ3 Bring it back to the color wheel...

Storhaug, Jan, 2/20/17

Why is realism important?

“We need to consider localization as a major aspect of auditory functioning and the quality of auditory experience.”

Byrne and Noble

“People may not report localization problems but they are present in older adults...” (Eddins, 2016)

Dr. Ann C. Eddins, WCA, 2016

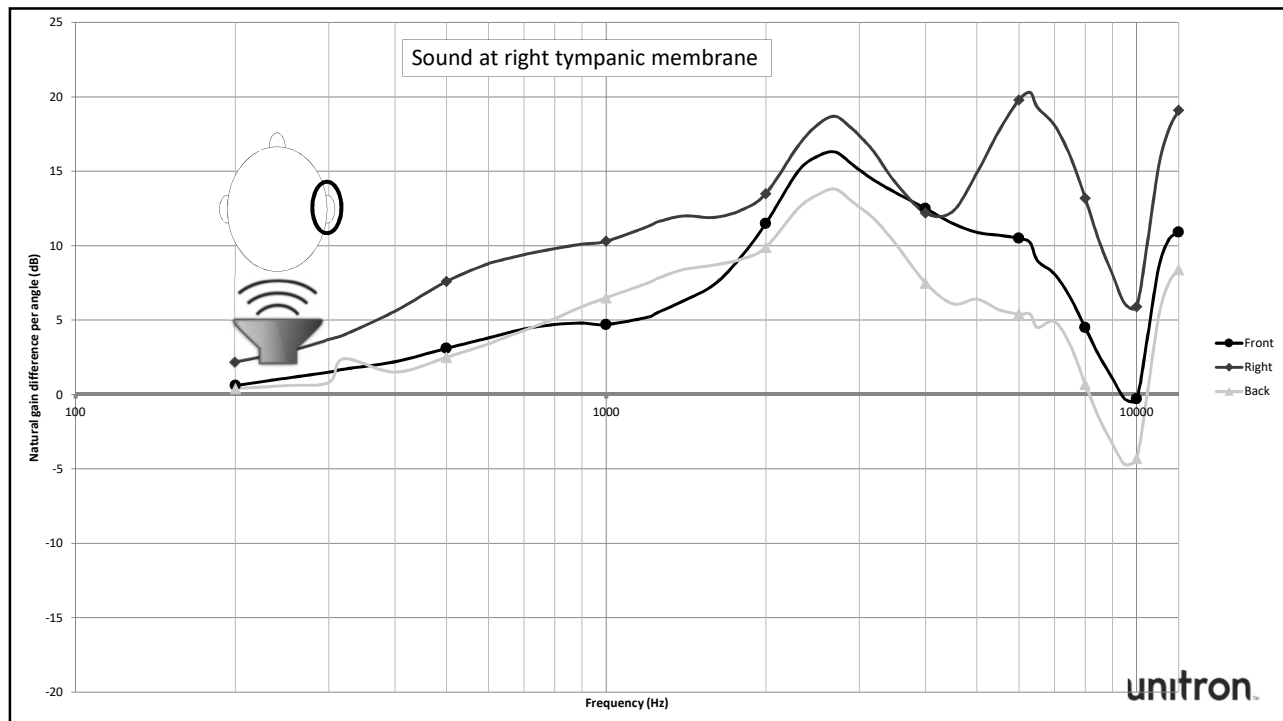

I can't find my cell phone when it's ringing

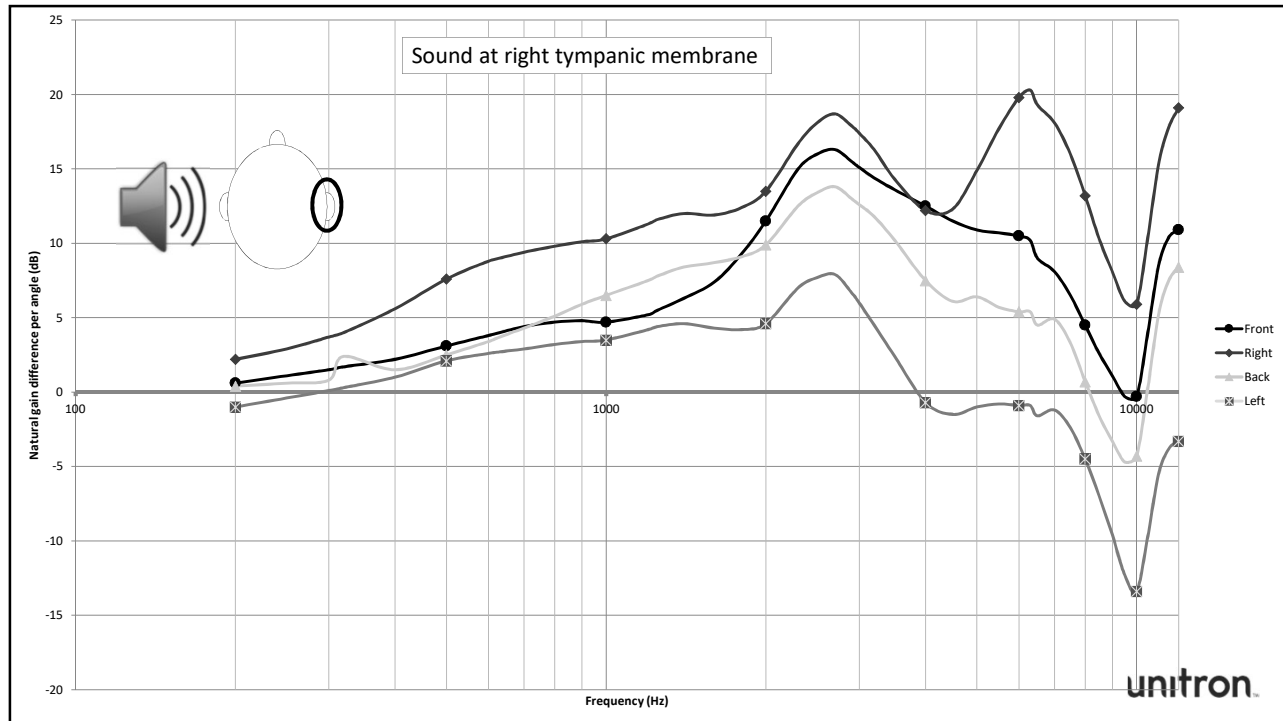

Spatial Awareness

Different angles result in different responses

Speech Focus: right and left

Put speech
in its place

SpeechPro is more than a microphone strategy!

Put speech
in its place

Traditional approaches use directionality to improve speech intelligibility in noise.

The unintended consequence is that directionality disrupts spatial awareness.

Put speech

Stride Insera Moxi™

What's inside the
best conversations?

The Insera logo is displayed in a square frame. Below the logo, a row of six custom hearing aids is shown, decreasing in size from left to right.

Insera does not simply deliver
Tempus technology in custom
hearing instruments

Now is the time for...

Our sophisticated EarMatch™ process optimizes directional performance by compensating for individual differences in external ear geometries

EarMatch™

1

Characterize

A 3D model of the individual's ear is generated from an impression. Based on this model EarMatch analyzes a multitude of anatomical parameters.

2

Recognize

Our recognition algorithm identifies ears by analyzing their unique features, then searches our comparative database to select a match.

3

Customize

Our modeling process then customizes the beamformer's calibration to create a directional response optimized for the individual's ear.

EarMatch™

1

Characterize

2

Recognize

3

Customize

The optimal directional performance created by EarMatch is necessary so that Tempus features provide maximum benefit for each individual

Freshly designed inside and out
with expanded possibilities,

Personalized Spatial Awareness

- Pro/800 technology levels only
- Applies only to the conversations in quiet and small group, quiet, and music environments
- Collapsed by default
- Parameters (tool tip on button hover over)
 - High (2600 Hz)
 - Average (2400 Hz)
 - Low (1500 Hz)

Feedback Manager Optimization

- Phase canceller has been optimized to reduce the incidence of feedback
- The optimization allowed the default setting to be reduced from “Max” to “Mod”
